Cisco 4000 Family Integrated Services Router

Cisco® 4000 Family Integrated Services Routers (ISRs) form an intelligent WAN platform that delivers the performance, security, and convergence capabilities that

Product Overview

The Cisco 4000 Family Integrated Services Router (ISR) revolutionizes WAN communications in the enterprise branch. With new levels of built-in intelligent network capabilities and convergence, it specifically addresses the growing need for application-aware networking in distributed enterprise sites. These locations tend to have lean IT resources. But they often also have a growing need for direct communication with both private data centers and public clouds across diverse links, including Multiprotocol Label Switching (MPLS) VPNs and the Internet.

The Cisco 4000 Family contains five platforms: the 4451-X, 4431, 4351, 4331, and 4321 ISRs.

Figure 1.   Cisco 4000 Series Integrated Services Routers

Features and Benefits

Cisco 4000 Family ISRs provide you with Cisco® Intelligent WAN (IWAN) software features and a converged branch infrastructure. Along with superior throughput, these capabilities form the building blocks of next-generation branch-office WAN solutions.

Cisco Intelligent WAN (IWAN)
Cisco IWAN is a set of intelligent software services that allow you to reliably and securely connect users, devices, and branch office locations across a diverse set of WAN transport links. IWAN-enabled routers like the ISR 4000 n up-to-the-minute application and network conditions for great application experiences. You get tight control over application performance, bandwidth usage, data privacy, and availability of your WAN links - control that you need as your branches conduct greater volumes of mission-critical business.

Cisco Converged Branch Infrastructure
The Cisco 4000 Series ISRs consolidate many must-have IT functions, including network, compute, and storage resources. The high-performance, integrated routers run multiple concurrent IWAN services, including encryption, traffic management, and WAN optimization, without slowing your data throughput. And you can activate new services on demand through a simple licensing change.

Table 1 breaks out many of the features and benefits of the Cisco 4000 Family that create an intelligent WAN and a converged branch infrastructure.

Table 1. Cisco 4000 Family ISR General Feature Highlights

Business Requirement(s)	Feature/Solution
Performance	
Throughput	

Table 2.   Architectural Highlights

Architectural Features	Benefits/Description
Multicore processors	High-performance multicore processors support high-speed WAN connections. The data plane uses an emulated QuantumFlow Processor (QFP) that delivers application-specific integrated circuit (ASIC)-like performance that does not degrade as services are added.
Embedded IP Security (IPsec) VPN hardware acceleration	Increases scalability. When combined with an optional Cisco IOS XE Software Security license, enables WAN link security and VPN services.
Integrated Gigabit Ethernet ports	The Cisco 4000 Family provides up to four 10/100/1000 Ethernet ports for WAN or LAN.
	Based on the platform, some of the 10/100/1000 Ethernet ports can support Small Form-Factor Pluggable (SFP)-based connectivity in addition to RJ-45 connections, enabling fiber or copper connectivity.
	Depending on the platform, PoE can be enabled as an option on up to two of the four ports.
	An additional dedicated Gigabit Ethernet port is provided for device management.
USB-based console access	A mini type-B USB console port supports management connectivity when traditional serial ports are not available.
	Traditional console and auxiliary ports are also available.
Optional integrated power supply for distribution of PoE	An optional upgrade to the internal power supply provides inline power (802.3af-compliant PoE or 802.3at-compliant PoE+) to optional integrated switch modules.
	Redundant PoE conversion modules provide an additional layer of fault tolerance.
	Optional PoE on two front Gigabit Ethernet interfaces provides power to external devices such as fourth-generation (4G) LTE routers.
Optional integrated redundant power supply (RPS)	For the ISR 4400 Series, power redundancy is available by installing an optional integrated RPS for decreasing network downtime and protecting the network from power failures.
	Optional PoE boost mode increases total PoE capacity to up to 1000W.
Cisco Enhanced Services Module (SM-X)	Each service-module slot offers high data-throughput capability of up to 10 Gbps toward the system and up to 1 Gbps to other module slots.
	Support for both single- and double-wide service modules provides flexibility in deployment options.
	The interface density can be increased with an optional carrier card that supports network interface modules in a service-module slot.
	Service modules support online insertion and removal (OIR), avoiding network disruption when installing new or replacement modules.
Cisco Network Interface Modules (NIMs)	Cisco NIMs evolve the small form factor pluggable (SFP) modules for increased port density and module capability compared to previous generations.
	Up to three integrated NIM slots on the Cisco 4000 Family allow for flexible configurations.
	Each NIM slot offers high-data-throughput capability, up to 1 Gbps toward the route processor and to other module slots.
	NIMs support OIR.
	Special NIMs add support solid-state drives (SSDs) and hard disk drives (HDDs).
Cisco Integrated Services Card (ISC) slot on motherboard	ISC natively supports the new Cisco High-Density Packet Voice Digital Signal Processor Modules (PVDM4s), providing greater-density rich-media voice.
	Each ISC slot connects to the system architecture through an up-to 2-Gbps link.
	Future modules can be hosted on the ISC slot, improving system functions.
Flash memory support	A single flash memory slot is available to support high-speed storage densities, upgradable to up to 32 GB.
	Two USB type A 2.0 ports provide secure token capabilities and convenient storage.
DRAM	For the ISR 4400 Series, the default control-plane memory is 4 GB, upgradable to 16 GB to provide additional scalability for control-plane features. The default data-plane memory is 2 GB.
	For the ISR 4300 Series, the default memory is 4 GB, upgradable to 16 GB to provide additional scalability.

Managing your Cisco ISR 4000 Family ISRs

The Cisco network management applications listed at the top of Table 3 are standalone products that can be purchased or downloaded to manage your Cisco network devices. The applications are built specifically for the different operational phases; select those that best fit your needs. Those management capabilities listed under the

operating system.

Table 3.   Network Management Solutions

Operational Phase	Application	Description
Device staging and configuration	Cisco Configuration Professional	A GUI-based device-management tool for Cisco IOS and Cisco IOS XE Software-based access routers. This tool simplifies routing, firewall, VPN, unified communications, and WAN and LAN configuration through easy-to-use wizards.
Networkwide deployment, configuration, monitoring, and troubleshooting	Cisco Prime Infrastructure	Offers comprehensive lifecycle management of wired and wireless access, campus, and branch-office networks, rich visibility into end-user connectivity, and application performance assurance. Provides wired lifecycle functions such as inventory, configuration, and image management; automated deployment; compliance reporting; integrated best practices; and reporting.
Staging, deployment, and changes to configuration and image files	Cisco Configuration Engine	A secure network management product that provides zero-touch image and configuration distribution through centralized, template-based management.
Context-aware security configuration and monitoring	Cisco Prime Security Manager	Management tool for configuring and managing context-aware security. The application supports both single- and multi-device manager form factors. Provides the ability to write and enforce the granular context-aware security policies.
Cisco Wide Area Application Service (WAAS) management	Cisco WAAS Central Manager	The management tool for the WAAS (WAN optimization and application acceleration) integrated service. It provides a centralized mechanism for configuring WAAS features, reporting, and monitoring.
Cisco IOS XE Software Embedded Management Capabilities		
Feature	**Description**	
Cisco IOS Embedded Event Manager (EEM)	A distributed and customized approach to event detection and recovery. Offers the ability to monitor events and take informational, corrective, or any desired EEM action when the monitored events occur or when a threshold is reached.	
Cisco IOS XE IP Service-Level Agreements (IP SLAs)	Helps assure the performance of new business-critical IP applications as well as IP services that use data and voice in an IP network	
SNMP, Remote Monitoring (RMON), syslog, NetFlow, IP Flow Information Export (IPFix)	Network monitoring and accounting tools	
Cisco onePK	Allows application developers to easily integrate the network with their applications	

Product Specifications

Table 4 lists the general product specifications for the Cisco 4000 Family routers.

Table 4.   Specifications of Cisco 4000 Family Integrated Services Routers

Technical Specifications	Cisco 4451-X	Cisco 4431	Cisco 4351	Cisco 4331	Cisco 4321
Throughput	1 Gbps to 2 Gbps	500 Mbps to 1 Gbps	200 Mbps to 400 Mbps	100 Mbps to 300 Mbps	50 Mbps to 100 Mbps
Total onboard WAN or LAN 10/100/1000 ports	4	4	3	3	2
RJ-45-based ports	4	4	3	2	2
SFP-based ports	4	4	3	2	1
Enhanced service-module slots	2	0	2	1	0
Doublewide service-module slots	1 (assumes no singlewide SM-X modules installed)	0	1 (assumes no singlewide SM-X modules installed)	0	0
NIM slots	3	3	3	2	2
OIR (all I/O modules)	Yes	Yes	Yes	Yes	Yes
Onboard ISC slot	1	1	1	1	1

Technical Specifications	Cisco 4451-X	Cisco 4431	Cisco 4351	Cisco 4331	Cisco 4321
Default memory double-data-rate 3 (DDR3) error-correction-code (ECC) DRAM (Combined control/services/data planes)	NA	NA	4 GB	4 GB	4 GB
Maximum memory DDR3 ECC DRAM (Combined control/services/data planes)	NA	NA	16 GB	16 GB	8 GB
Default memory DDR3 ECC DRAM (data plane)	1 GB	1 GB	NA	NA	NA
Maximum memory DDR3 ECC DRAM (data plane)	2 GB	2 GB	NA	NA	NA

Cisco IOS XE Software					
Protocols	IPv4, IPv6, static routes, Routing Information Protocol Versions 1 and 2 (RIP and RIPv2), Open Shortest Path First (OSPF), Enhanced IGRP (EIGRP), Border Gateway Protocol (BGP), BGP Router Reflector, Intermediate System-to-Intermediate System (IS-IS), Multicast Internet Group Management Protocol Version 3 (IGMPv3), Protocol Independent Multicast sparse mode (PIM SM), PIM Source Specific Multicast (SSM), RSVP, CDP, ERSPAN, IPSLA, CNS, Call Home, EEM, IKE, ACL, EVC, DHCP, FR, DNS, LISP, OTV, HSRP, RADIUS, AAA, AVC, Distance Vector Multicast Routing Protocol (DVMRP), IPv4-to-IPv6 Multicast, MPLS, Layer 2 and Layer 3 VPN, IP sec, Layer 2 Tunneling Protocol Version 3 (L2TPv3), Bidirectional Forwarding Detection (BFD), IEEE802.1ag, and IEEE802.3ah				
Encapsulations	Generic routing encapsulation (GRE), Ethernet, 802.1q VLAN, Point-to-Point Protocol (PPP), Multilink Point-to-Point Protocol (MLPPP), Frame Relay, Multilink Frame Relay (MLFR) (FR.15 and FR.16), High-Level Data Link Control (HDLC), Serial (RS-232, RS-449, X.21, V.35, and EIA-530), and PPP over Ethernet (PPPoE)				
Traffic management	QoS, Class-Based Weighted Fair Queuing (CBWFQ), Weighted Random Early Detection (WRED), Hierarchical QoS, Policy-Based Routing (PBR), Performance Routing, and NBAR.				

Cisco IOS Software Licensing and Packaging

Universal IOS XE Image

A single Cisco IOS XE Universal image encompassing all functions is delivered with the platform. Advanced features can be enabled by simply activating a software license on the Universal image. Technology packages and feature licenses, enabled through right-to-use licenses, simplify software delivery and decrease the operational costs of deploying new features.

Four major technology licenses are available on the Cisco 4000 Family; these licenses can be activated through the Cisco software activation process identified at http://www.cisco.com/go/sa. The following licenses are available:

IP Base: This technology package is available as default.

Application Experience (APP): This license includes data and application performance features.

Unified Communications: This license includes voice features.

Security (SEC) or Security with No Payload Encryption (SEC-NPE): This license includes features for securing network infrastructure.

The Cisco 4000 Series has a performance-on-demand license to increase the base forwarding throughput with no hardware changes. Also present is the High Security (HSEC) license, which removes the curtailment enforced by the U.S. government export restrictions on the encrypted tunnel count and encrypted throughput.

For additional information and details about Cisco IOS Software licensing and packaging on the Cisco 4000 Family, please visit http://www.cisco.com/c/en/us/td/docs/routers/access/4400/software/configuration/guide/isr4400swcfg.pdf.

Cisco ISR 4000 AX and AXV Bundles

Cisco ISR 4000 AX bundles integrate Cisco Wide Area Application Services (WAAS), Security (SEC), and Data (DATA) licenses into a single bundle that is simple to order, configure, and deploy. For customers who are also interested in voice along with all of these features, AXV presents an attractive option. See Table 5 for details.

Table 5.   Cisco ISR 4000 AX and AXV Feature Bundles

Bundles	Features
Application Experience with Voice (AXV)	AX + Voice
Voice with Security (VSEC)	Voice + Security
Application Experience (AX)	IP Base + Security + Advanced Networking: L2TPv3, BFD, MPLS, VRF, VXLAN Application Experience: PfRv3, WAAS with AppNav, NBAR2, AVC, IP SLA Hybrid Cloud Connectivity: LISP, OTV, VPLS, EoMPLS Intelligent Web Caching: Akamai Connect
Voice (V)	IP Base + Unified Communications: CME, SRST, CUBE
Security (SEC)	IP Base + Advanced Security: Zone Based Firewall, IPSec VPN, EZVPN, DMVPN, FlexVPN
Performance (PERF)	ISR 4451-X: Increases the performance from base performance 1 Gbps to 2 Gbps ISR 4431: Increases the performance from base performance 500 Mbps to 1 Gbps ISR4351: Increases the performance from base performance 200 Mbps to 400 Mbps ISR 4331: Increases the performance from base performance 100 Mbps to 300 Mbps ISR 4321: Increases the performance from base performance 50 Mbps to 100 Mbps

More information on ISR AX bundles is available at http://www.cisco.com/go/ax.

A pay-as-you-grow licensing model lets you increase the performance level for the platforms from the base level to a higher level. So you can purchase at an attractive entry-level price point and increase the performance level as your business demand grows. Table 6 describes the performance licenses.

Table 6.   Cisco ISR 4000 Performance Licenses

Platform	Performance-on-Demand License	Features
ISR4451-X	FL-44-PERF-K9	Increases the performance from base performance 1 Gbps to 2 Gbps
ISR4431	FL-44-PERF-K9	Increases the performance from base performance 500 Mbps to 1 Gbps
ISR4351	FL-4350-PERF-K9	Increases the performance from base performance 200 Mbps to 400 Mbps
ISR4331	FL-4330-PERF-K9	Increases the performance from base performance 100 Mbps to 300 Mbps
ISR4321	FL-4320-PERF-K9	Increases the performance from base performance 50 Mbps to 100 Mbps

Ordering Information

The Cisco ISR 4000 Family is orderable and shipping. To place an order, refer to Table 7

Cisco SMARTnet® technical support for the Cisco ISR 4000 Family is available on a one-time or annual contract basis. Support options range from help-desk assistance to proactive, onsite consultation. All support contracts include:

Major Cisco IOS Software updates for protocol, security, bandwidth, and feature improvements

Full access rights to Cisco.com technical libraries for technical assistance, electronic commerce, and product information

For More Information

For more information about the Cisco ISR 4000 Family, visit http://www.cisco.com/go/ISR4K or contact your local Cisco account representative.
