# dLAN® 200 AV USB

Network USB printers and USB hard drives for shared use in the home – very easily over your home powerline.

The dLAN® 200 AV USB extender makes it easy to now also share the use of USB printers or USB hard drives intelligently, as this adapter is the first product to enable terminal devices with USB connection to be connected via the powerline. In addition, the dLAN® 200 AV USB extender is the ideal solution when USB cables are not long enough – dLAN® works over more than 300 meters. Any power socket in the house can become a USB port. It is as easy as child's play to connect USB printers, USB hard drives and USB scanners to the powerline adapter. This lets you share them and use them from several computers. This saves space and money: one printer, for example, is enough for the whole family, and the USB hard drive with music, photos, movies and documents becomes the centralised data store for all.
