

The Wireless Expert

The **New** All-in-One Intelligent Wireless Controller

To address the complexity of installing WLAN solutions and the boom in Wi-Fi connectivity ZyXEL is launching the NXC2500, an all-in-one, Intelligent Wireless LAN controller and smoke-detector style NWA5120 series of Access Points (AP's). The ZyXEL NXC2500 is designed to provide resellers and business with a solution that works as an AP planning, deployment, monitoring and maintenance solution while offering management, authentication and guest access within an all-in-one device.

Through the combination of the NXC2500 and the ZyXEL WLAN Optimizer application, users can plan the deployment and placement of the AP's prior to installation. Once the NXC Controller solution is deployed it collects data from the AP's to optimise coverage, performance and highlight issues such as Wi-Fi dead spots.

Why Buy?

- › A Solution to simplify complex Wi-Fi installations
- › ZyXEL WLAN Optimizer for easy planning, deployment and maintenance
- › Simple upgrade solution for existing ZyXEL standalone AP installations
- › Lifetime warranty
- › Free product firmware enhancements
- › Special introductory launch offer
- › Technology designed by Networking Experts for leading telco's being delivered to SMB business
